LAERDAL SERVICES PRACTICE LIST

Laerdal Educational Courses

Introductory Training for Patient Simulators

This basic course enables participants to assemble their simulators, operate the simulator's user interface, program and run scenarios using an instructional design process. Participants develop two complete scenarios and receive worksheets and check lists for future scenario developments.

Scenario Programming for Patient Simulators

This course is designed for the advanced user who seeks additional skills programming scenarios. Participants learn scenario design using the Laerdal Scenario Programming Worksheet. Emphasis is placed on programming Trends and Handlers. Attendees must have attended an Introductory Training course or possess experience operating a Laerdal simulator.

Customised Instruction

This consultative service is ideal for groups that prefer personalised instruction at their facility. Educational Services specialists or external partners will assist in planning a tailored session to meet the specific needs of your organisation. This can include product training, scenario writing, simulation planning and management, and course facilitation and debriefing skills.

Custom Scenario Development

Available for all Patient Simulators helping you design, programme, validate, and implement simulation scenarios which match your organisation's goals and learning objectives.

Teaching with Scenarios

Upon completion of this course, participants will be able to install a Laerdal Scenario Package on a licensed PC and identify scenario learning goals and supporting material. Class time also includes identification of equipment needs, learner roles, and correct treatment parameters.

The course concludes with instruction and best practices for conducting a debriefing and guided reflection session that concentrates on maximising the learning experience for your students.

Simulation Business Plan

Planning your Clinical Simulation Lab can be an overwhelming experience. Laerdal can help with our planning guide and workshop which is designed to take you through the process of developing a state of the art simulation centre. All important areas are covered including the current environment, resources, stakeholders, objectives and assessments in regards to equipment, facilities and patient cases.

Please contact Laerdal for more information or visit our website (look under Events) on any of these courses.

See inside brochure for more information and pricing.
