

# Building High-Performance Resuscitation Teams

**With only minutes making the difference between a patient's life and death, Sudden Cardiac Arrest (SCA) highlights the need for the best team performance possible**

In this hands-on interactive course you will see how team performance in resuscitation can instill saving lives into part of a team's character. You will experience how simulation can lead to improved individual competency, team coordination, team assertiveness, and team familiarity with a process. You will also discover how simulation can help teams develop situational awareness, overcome the unexpected, and develop the adaptive behavior necessary when things don't go as planned.

## ***Improved Outcomes Start Today!***

Past experience tends to guide future experience. Once teams train and practice their craft, as if they intended to save a life, and do, then success becomes the new normal. Start by asking yourself, your teammates and your organizational leaders, "How can we do better?", and you'll be on the way to a high-performance new normal.

*- The Resuscitation Academy*

How will you apply the lessons learned today and what do you think your team could do better?
