Material Specialist
- Product Development

one-year temporary position

In Product Development, selecting the right material is important in creating customer value and assuring the right quality. In addition to meeting technical requirements, our products must meet the increasing restrictions to protect human health and the environment.

To strengthen our focus we seek a solution-oriented material specialist with interest for and competence in materials and environmental/health issues, who can work closely together with our production units, procurement (locally and globally) and QA/Regulatory department in finding the best solutions.

The Position:

• contribute in material selection during product development
• be updated on material related regulations (like REACH and RoHS)
• ensure implementation of good quality assurance procedures for materials
• establish good relations and cooperation with production and procurement units
• support risk assessment

The Candidate:

• education on bachelor level or higher within materials, chemistry, or similar
• 2 – 3 years relevant experience
• knowledge of processing of plastics is advantageous
• fluent in English written and orally
• independent and well-organized
• good cooperative skills

For more information about this position contact Jan Vastvedt, phone +47 99357260 or e-mail jan.vastvedt@laerdal.no

Application with CV should be sent as soon as possible and before 20th January to HR@laerdal.no
