helping save lives

Laerdal Accelerate™ Program

Simulation brought to you, run in partnership for the moments that matter

Accelerate is managed, on-site simulation that Laerdal brings to your organization and runs in partnership with your team. From setup through facilitation and debrief, the entire experience is delivered for you—so your team can focus on improving performance while gaining meaningful insights.

More than training, it's a structured model for strengthening team performance and readiness when it matters most.

This one-of-a-kind program offers turnkey simulation that includes:

- No need to purchase simulators or equipment
- Delivered in your real care environment and workflows
- No internal setup, additional staffing, or program management
- Clear insight into team performance and opportunities for improvement

Laerdal.com/Accelerate

A Flexible Model That Delivers Impact

Accelerate meets organizations where they are—supporting a range of starting points while delivering meaningful, measurable impact.

- ✓ **For organizations with established simulation programs:** Expands capacity, extends reach, and increases impact without adding workload.
- ✓ **For organizations with limited simulation resources:** Provides a complete solution to build capability and launch a program with confidence.

Everything needed - brought to you

Accelerate delivers a complete simulation program to your organization—providing everything needed to run high-impact training without building or managing a program, and without capital investment.

Delivered and managed on-site

From setup through facilitation and wrap-up, everything is handled directly in your care setting and workflows

Simulators, equipment, and scenarios

All equipment and targeted scenarios are provided and aligned to your needs

Expert facilitators and operators

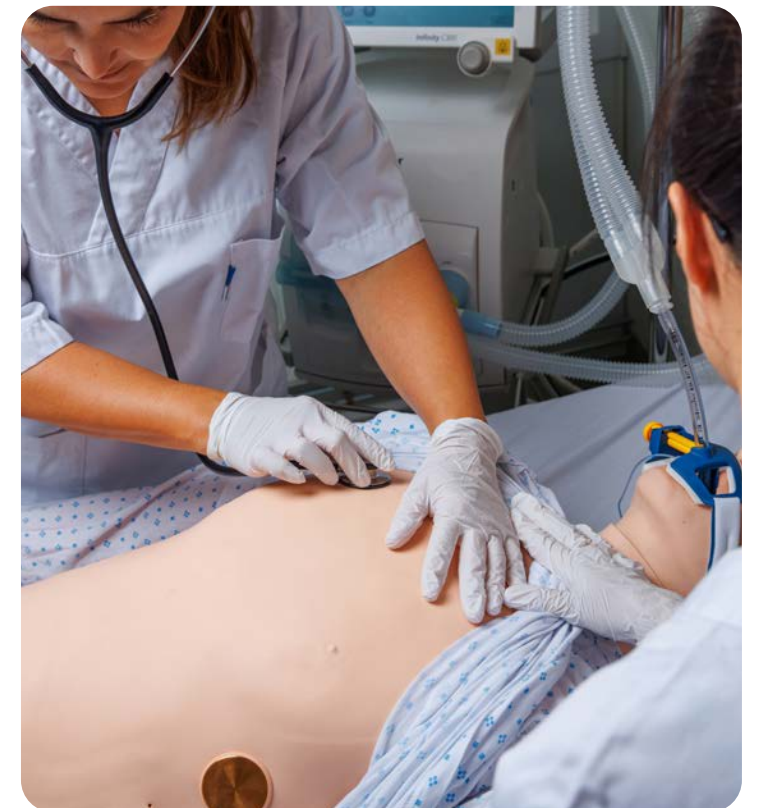

Delivered by experienced teams aligned with best-practice standards

Structured, immersive learning experiences

Designed to engage teams and reflect real-world clinical challenges

Measured outcomes and performance insights

Actionable data to identify gaps and guide continuous improvement

Accelerate Is Different

Focused on performance, not just completion

Many programs focus on completion. Accelerate focuses on performance—helping you see how teams actually perform, not just what was trained.

- Identify gaps, risks, and opportunities for improvement
- Drive continuous quality and performance improvement
- Build readiness for high-risk, high-impact scenarios
- Gain the impact of simulation without building programs or expanding internal resources

Designed for quality improvement, to identify risk earlier

By running high-risk, real-world scenarios, Accelerate helps teams identify and address risks before they impact patient care.

- Reveal breakdowns in communication, workflow, and decision-making
- Surface risks not visible in day-to-day operations
- Identify safety risks and system gaps early
- Strengthen processes and protocols through real-world testing

Turnkey simulation, designed to fit your program

A complete simulation program brought directly to your organization—designed to work as either a standalone solution or in partnership with your existing simulation program.

- No equipment required to expand your capabilities
- No additional infrastructure or program management needed
- Implemented in collaboration with your team and priorities
- Flexible to complement and extend existing programs

Built for real-world performance in real care settings

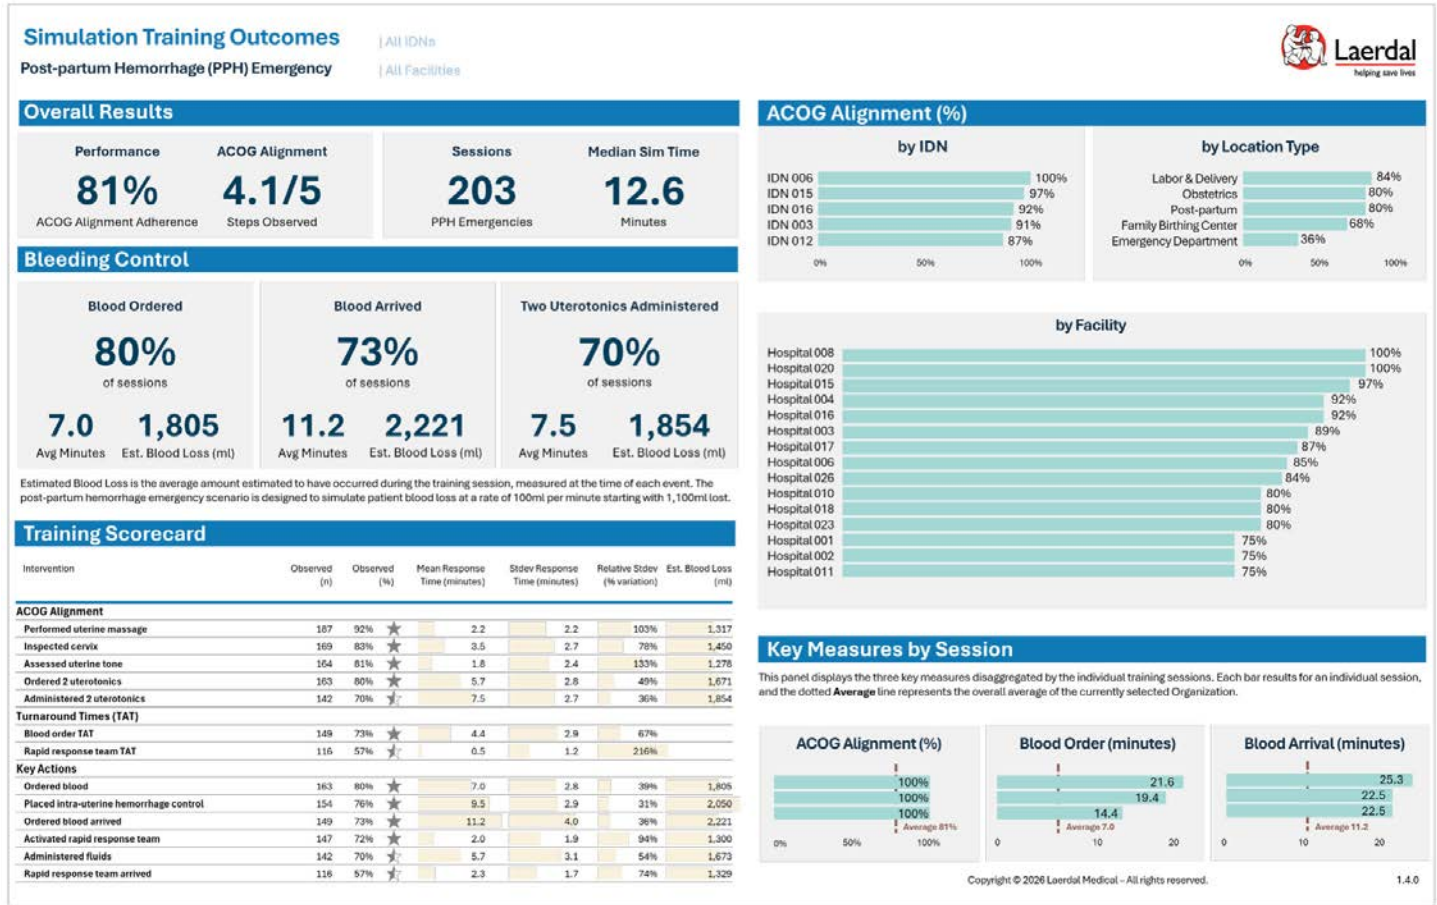

Training delivered where performance matters most, in the environments where care is actually provided.

- Focus on low-frequency, high-risk events
- Delivered in your actual working environment
- Designed around real workflows and system risks
- Enables repeatable, scenario-based practice

Expected Outcomes

Accelerate supports organizations that want to:

- Strengthen readiness for low-frequency, high-risk events
- Move beyond training to meaningful performance improvement
- Scale simulation across teams and locations
- Deliver consistent, high-quality experiences
- Balance operational demands with effective training

By aligning simulation with health service priorities, organizations can identify risks, test new approaches, and strengthen team performance—bridging the gap between how care is designed and how it is actually delivered.

Gain clear insight into readiness

Increase visibility into performance gaps, risks, and opportunities for improvement

Demonstrate measurable progress

Align to quality, safety, and organizational goals—with evidence of improvement over time

Perform with confidence under pressure

Improve coordination, decision-making, and team confidence in critical moments

Expand capability across your organization

Scale across teams and locations without additional staffing or infrastructure

Courses built around real challenges

Accelerate includes a growing catalog of simulation experiences designed to support real-world performance.

Critical Medical Conditions

Develop the clinical judgment and teamwork needed to respond to complex medical emergencies requiring rapid assessment, prioritization, and intervention.

Neonatal & NICU

Prepare neonatal teams for critical events occurring during the first moments of life. These simulations build confidence in neonatal assessment, stabilization, communication, and resuscitation.

Obstetric Emergencies

Prepare labor and delivery teams for high-risk, low-frequency maternal and neonatal events. These simulations focus on rapid recognition, coordinated response, team communication, and evidence-based management to help improve readiness and patient safety.

Patient De-escalation & Safety

Build confidence in managing challenging patient and family interactions while creating a safer environment for patients, visitors, and staff. Through immersive simulation, teams develop communication strategies that support workplace safety, reduce escalation, and strengthen situational awareness.

Perioperative Emergencies

Help perioperative teams prepare for procedural, surgical, and post-operative crises through realistic simulation that emphasizes clinical judgment, patient safety, and coordinated team response.

Respiratory Emergencies

Prepare to recognize, assess, and manage respiratory compromise across adult, pediatric, and neonatal populations. These simulations focus on airway management, critical thinking, and coordinated response during respiratory emergencies.

Resuscitation & Code Management

Strengthen team performance during life-threatening events through simulation aligned with nationally recognized resuscitation practices. Emphasis is placed on high-quality CPR, teamwork, communication, and adherence to evidence-based guidelines.

Sepsis & Patient Deterioration

Improve recognition and response to sepsis and clinical deterioration through evidence-based, bundle-focused training designed to support timely intervention and improved patient outcomes.

Trauma & Massive Transfusion

Train multidisciplinary teams to assess, stabilize, and manage critically injured patients while effectively activating and implementing Massive Transfusion Protocols. These simulations emphasize teamwork, communication, and evidence-based trauma care.

More In Development!

Additional content is always in development to expand Accelerate training coverage. For a full list of available courses, visit Laerdal.com/Accelerate

How Accelerate Works

Align on goals

Define priorities based on your risks, workflows, and teams, ensuring alignment with your organizational objectives and performance goals.

Select scenarios

Choose targeted scenarios built around real-world situations and tailored to your priorities, workflows, and care environments

On-site simulation

Laerdal brings everything and runs the program in partnership with your educators and leaders.

Debrief and improve

Assess performance, identify gaps, and define actions to help improve outcomes and readiness.

See How Laerdal's Accelerate Program Works for Your Organization

Support your team's readiness and performance with a managed simulation model.

- Explore real-world examples
- Identify opportunities to improve
- Understand how a managed simulation model works in your organization
